PROFESSIONAL SUMMARY

Software Developer with a strong foundation in front-end development, full-stack engineering, UX, and technical project leadership. Experienced in building user-focused applications, solving complex technical problems, and bridging business needs with effective software solutions. Skilled at collaborating directly with clients and cross-functional teams, translating requirements into clear technical direction, and guiding work from planning through development, testing, and launch.

EXPERIENCE

Technical Project Lead

December 2025 – July 2026

Clarity Ventures

Remote

- Promoted from Junior Front-End Developer to Technical Project Lead in recognition of strong technical ownership, client leadership, and successful project delivery.
- Served as both Technical Project Lead and lead developer across four to six concurrent custom web projects, continuing to write production code and implement full-stack features using Remix, React, TypeScript, JavaScript, C#, .NET, SQL, and REST APIs.
- Led technical delivery from discovery through launch, making implementation decisions, estimating development work, defining acceptance criteria, and translating business requirements into actionable development tasks.
- Acted as the primary client contact for requirements discussions, status meetings, technical demonstrations, training, and issue resolution, bridging communication between clients and technical teams.
- Coordinated developers, QA resources, and client stakeholders while managing priorities, timelines, budgets, risks, change requests, UAT, and release readiness.

Junior Front-End Developer

December 2024 – December 2025

Clarity Ventures

Remote

- Built production web applications across HIPAA-compliant healthcare, payment, auction, and ecommerce platforms, growing from front-end development into full-stack responsibilities.
- Translated Figma designs into responsive, accessible interfaces and reusable components using React, Remix, TypeScript, Tailwind CSS, Bootstrap, HTML, and SCSS.
- Integrated REST APIs and third-party services to support payment processing, invoices, auctions, customer accounts, and administrative workflows.
- Expanded into backend development using C#, .NET, SQL Server, and Entity Framework Core to implement business logic, data flows, and end-to-end application features.

User Experience and Web Developer Intern

May 2023 – August 2024

Irdeco

Pontiac, MI

- Owned the UX design process for web and mobile experiences supporting a keyless fleet-management platform, creating user flows, wireframes, and interactive prototypes in Figma and ProtoPie.
- Redesigned mobile application workflows by identifying usability pain points, simplifying complex in-vehicle tasks, and iterating on solutions with stakeholders.
- Implemented the front end of the web application from wireframes, high-fidelity designs, and interactive prototypes developed during the UX process, using React, TypeScript, PrimeReact, SCSS, and Bootstrap.
- Created and maintained a reusable design system with standardized components and visual patterns to improve consistency between design and development.

PROJECT EXPERIENCE

MARAbio Patient & Provider Portals | HIPAA, Remix, TypeScript, C#/.NET, REST APIs

- Delivered HIPAA-compliant patient and provider portals as Lead Front-End Developer, taking responsibility for front-end architecture, implementation, testing, and release readiness.
- Connected patient and provider experiences to REST APIs and contributed to C#/.NET backend logic supporting end-to-end healthcare workflows.

Local Lots Auction Platform | UX/UI, Remix, TypeScript, Tailwind CSS, PayPal

- Led front-end development and UX implementation for an online auction platform, shaping user flows for auction discovery, lot details, bidding, account management, and checkout.

- Refined layouts, interactions, and responsive behavior to create a consistent auction experience across desktop and mobile devices.
- Integrated PayPal payment processing and contributed to C#/.NET backend functionality supporting bidding and transaction workflows.

Payment Hub Portals – WRM/Southwaste & OPUS | *ERP Integrations, C#/.NET, SQL, REST APIs*

- Built full-stack customer payment portals integrated with ERP systems, enabling users to review account balances, invoices, statements, and submit payments online.
- Engineered full-stack customer payment portals integrated with ERP systems, enabling users to review account balances, invoices, statements, and submit payments online.
- Automated past-due and upcoming-payment email notifications and developed downloadable PDF statements for customer billing workflows.
- Directed technical delivery of the WRM/Southwaste portal as Technical Project Lead and lead developer, coordinating client requirements, demonstrations, QA/UAT, deployment, go-live, and post-launch support.
- Delivered OPUS Inspection invoice and payment functionality across the front and back end, including integrations supporting customer billing processes.

Fooducate Nutrition Platform | *React, Material UI, Firebase, GPT API, Google Vision AI*

- Implemented the front end of a nutrition tracking and meal-planning web application, creating interactive experiences for dashboards, meal planning, grocery lists, and lifestyle goals.
- Structured the application with reusable React components and state-driven functionality using Material UI, connecting the interface to Firebase for dynamic and personalized data.
- Incorporated AI-powered nutrition features using GPT API and Google Vision AI to support personalized guidance and simplify diet tracking.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, C#, SQL, HTML, CSS, SCSS, Java

Front-End: React, Remix, Next.js, Tailwind CSS, Bootstrap, Material UI, PrimeReact

Backend & Data: .NET, REST APIs, SQL Server, Entity Framework Core, Firebase, Firestore, ERP Integrations

Cloud & DevOps: Azure, Azure DevOps, Docker, Kubernetes, Linux, CI/CD, Git

Testing & Debugging: Jest, Feature Testing, Regression Testing, Browser Compatibility Testing, API Debugging, UI Debugging, Production Troubleshooting

UX & Design: Figma, ProtoPie, FigJam, UX/UI Design, Wireframing, Prototyping, Usability Testing, Accessibility, Responsive Web Design, Design Systems

Technical Leadership: Client & Stakeholder Management, Requirements Analysis, Solution Planning, Technical Estimation, Backlog Prioritization, Developer/QA Coordination, Release Planning

EDUCATION

Oakland University, School of Engineering and Computer Science

Bachelor of Science in Information Technology

Rochester Hills, MI

Aug. 2019 – Aug. 2024

- Summa Cum Laude, 3.91 GPA
- Minor in Management Information Systems
- Professional track in Application Development
